

Benefits of eBOL

On-demand access to documents thereby saving time and money

Single signature pickup will reduce driver holdup

Reduces Printing and handling costs

Any amendments or corrections required can be made far more efficiently and cost effectively.

No more manual error-prone processes

Electronically share documents. Reduced Carbon footprint

Visually Capture images of goods and tag them for future reference

About the eBOL System

The eBOL system helps to create, sign, manage, archive and retrieve bills of lading and packing slips digitally, thereby providing greater accuracy, integrity and speed of storage and retrieval.

ELECTRONIC BILL OF LADING

Features...

Generating Shipping Documentation

Creates shipping documents such as bills of lading, packing slips as a standalone system and / or by reusing information from an External system

Signature Acceptance

This application is capable of accepting single signature from driver and applies to all underlying documents

Printing and sharing documents

Can print only documents that are in need (drivers copy), capable of sharing documents through email securely.

Capture Images of Shipping Documents

Visually Capture images of goods and tag them for future reference

Document Retention & Rendering

This system offers the real-time, On-Demand access to **BOL** Documents digitally, By this you can eliminate document access delays and unnecessary manpower utilization on document handling.

Multiple Device compatibility

Is compatible with different device sizes of mobiles, ipads, Tablets, PCs and Laptops.

Reporting

- Driver-check in and check out module is present to log driver check in and check-out times, scanning driver identification and maintains records.
- eBOL application is capable of recording analytical information on data transaction in the system such as

- o EBOLs generated for the day.
- o By Departure signature

Data Acceptance

This application is capable of fetching data from clients' file server, it can also accept data in **XML and PDF formats** and validate accordingly.

Rejected Documents handling

Another feature of this application is reprocessing of rejected data. The system displays all error data relating to documents like packing slips, BOLs, Loads etc that were flagged as error in the interface from ERP/WM systems. It provides ability to correct and re-apply the data.

System Maintenance

o Error Logging

Error log can be used to identify how many errors are issued, what functions the system errors occurred in, You can even determine the user, date and time of the error that has occurred,

o Transaction Log

The transaction log is a history of actions executed by any user, a log is a file listing changes to the database.
